

Sierra Vista 25-Minute Briefing Script

Canonical presenter script with FormSpace framing overlays

Event	ITDX26 — U of Arizona Sierra Vista, 8–18 Sept 2026
Track	Algorithm-only, unclassified, laptop-based evaluation
Solicitation	W91RUSI-FCID260001 (SUB-007)
Submitter	Mycosoft, LLC · CAGE 9KR60 · UEI YK3ARVKJ77S9
PI / POC	Morgan Rockcoons, Founder & CEO · morgan@mycosoft.org · (619) 483-1077
Handling	UNCLASSIFIED // PROPRIETARY
Version	FormSpace overlay v1.0 — 2026-09-01

0:00 – 1:30 · Field-context film (90 s)

Play the 90 s ITDX context cut. Do not narrate over the film unless asked. Let the real devices and real interface establish credibility.

1:30 – 3:00 · The thesis

"Every algorithm you're about to see is one operation on the same object: Form Space, the equivalence structure the Nature Learning Model learns from calibrated multi-modal signals. Pattern finds classes. Link infers relations. Courses of Action pick constrained trajectories. Map projects. Same math object, four operations, one evidence chain."

3:00 – 6:00 · Architecture

"NLM estimates state and uncertainty in Form Space. FUSARIUM builds typed graphs over Form-classes. MYCA proposes trajectories on the admissible submanifold. AVANI is the deterministic gate that decides which trajectories are permitted. MINDEX preserves lineage. CREP renders inspectable Map Products."

6:00 – 11:00 · Task 12 Pattern Analysis

"Pattern Analysis is equivalence-class discovery in Form Space." Load the field timeline. Show deterministic baseline candidates. Show NLM SSM scores. Show second independent source arrival. Show correlated event publication. Compare latency, precision/false-alert behavior, calibration, and node-dropout behavior. Show a failure case where a single drifting sensor is rejected or downgraded.

11:00 – 15:00 · Task 13 Link Analysis

"Link Analysis is typed hypergraph inference over Form-classes." Open the event graph. Center on the hazard event. Traverse to Mushroom 1 chemical observation, Agaric imagery, Psathyrella acoustic context, Hyphae link trace, model result, COA, approval, command, ACK, and outcome. Toggle observed versus inferred edges. Remove Agaric and show which evidence paths and communication paths disappear. Report graph metrics and limitations.

15:00 – 19:00 · Task 8 Courses of Action

"Courses of Action are constrained trajectories on the admissible submanifold, filtered by the AVANI gate." Present three COAs. Show criteria: safety, information gain, energy, communications,

reversibility. Show MYCA agent roles: proposer, critic, evidence verifier, safety reviewer, final synthesizer. Show AVANI gate and human approval. Compare single-agent versus multi-agent output and time/cost.

19:00 – 21:00 · Task 14 Map Product

"The Map Product is a deterministic projection of Form Space onto Army coordinates, with uncertainty made visible. No ML in the critical path." Show device positions and health, direct and relayed communications, hazard proxy and uncertainty envelope, tracks and standoff, event timeline, evidence inspection, classification/handling banner. Point out the fallback-state label.

21:00 – 23:00 · Failure and recovery

"When we lose a node, we lose Form-class evidence; store-and-forward plus Merkle reconciliation recovers the class without inventing observations." Inject a link loss or select the recorded partition segment: direct path fails; edge nodes continue; queues grow; Agaric or Hyphae provides alternate path; contact returns; anti-entropy reconciliation completes; run root remains verifiable.

23:00 – 25:00 · Limitations and ask

State the six limitations from the Known Limitations one-pager verbatim. Then ask for a scoped follow-on: Army-defined unclassified scenario and dataset; SME adjudication of pattern/link/COA products; permission to integrate a field-derived edge dataset into a follow-on experiment; funded prototype phase for the AI Analyst / ENVINT workflow.

Underperformance statement (verbatim if any live run misses target)

"This live configuration did not meet its preregistered target. The observed [metric] was [value] against a preregistered target of [target]. The deterministic baseline achieved [value]. We will report this in the run manifest and the release readiness summary. The result is captured, signed, and reproducible; we do not attempt to fix it live."
